

Outcome Span review

A lightweight decision record for keeping rapid AI delivery connected to value, control, evidence, integration, adoption, and ownership. Designed to complement Crowe’s established delivery methodology.

WORKSTREAM IDENTITY

Client / workstream:	Review date / cadence:
Executive sponsor:	Operating owner:
Delivery lead:	Current decision: Advance / Reframe / Bound / Sequence / Hold / Stop

1 · OUTCOME CONTRACT

Decision or workflow result that changes:

User / beneficiary and current friction:

Baseline evidence and measurement category:

Scope, non-goals, and smallest useful slice:

2 · WORKFLOW AND INTEGRATION

Actors, steps, inputs, decisions, actions, exceptions:

Source systems, data/context, APIs/connectors, security constraints:

Integration uncertainty and boundary test:

REVIEW PROMPTS

Useful? Inside real work, not an adjacent demo?	Viable? Context, integration, quality, cost and latency?	Bounded? Human authority, permissions, exceptions and fallback?	Provable? Acceptance cases, logs and adoption evidence?	Ownable? Client owner, support, cadence and improvement path?
---	--	---	---	---

3 · ACTION ENVELOPE

AI posture	Allowed behavior	Human authority / escalation	Fallback
Suggest / summarize			
Draft / prepare			
Decide / recommend			
Execute / update systems			

4 · PROOF TRAIL

Evidence category	Test / baseline / unit	Observed result	Decision implication
Quality / task success			
Grounding / trace			
Latency / reliability			
Cost / operating effort			
Adoption / user behavior			

5 · OWNERSHIP TRANSFER

Named owner, support path, and operating cadence:
Training, change burden, and feedback mechanism:
Reusable asset / lesson to harvest:
Next decision, owner, evidence required, and date:

Decision rationale

What evidence supports Advance / Reframe / Bound / Sequence / Hold / Stop? What would change the decision?
